

Van 't Hoff Symposium on Chirality

Stichting van 't Hoff Fonds

Prof. Dr. B. List

Prof Dr. R. Naaman

Prof Dr. D. Blackmond

Prof Dr. S. Goldup

Prof Dr. J. Montenegro

Prof Dr. S. Vignolini

Chirality has fascinated scientists since the 3D models of molecules proposed by van 't Hoff.

It plays a key role in molecular properties, and as such is important for chemical synthesis, and it also impacts the fields of supramolecular chemistry and materials science.

When June 2nd 2022

Where KNAW, Trippenhuis, Amsterdam

Free registration

Chirality is the central theme of this symposium, and the state of the art in the different areas will be discussed by a diverse panel of inspiring scientists.
